Dryers and Heat Exchangers

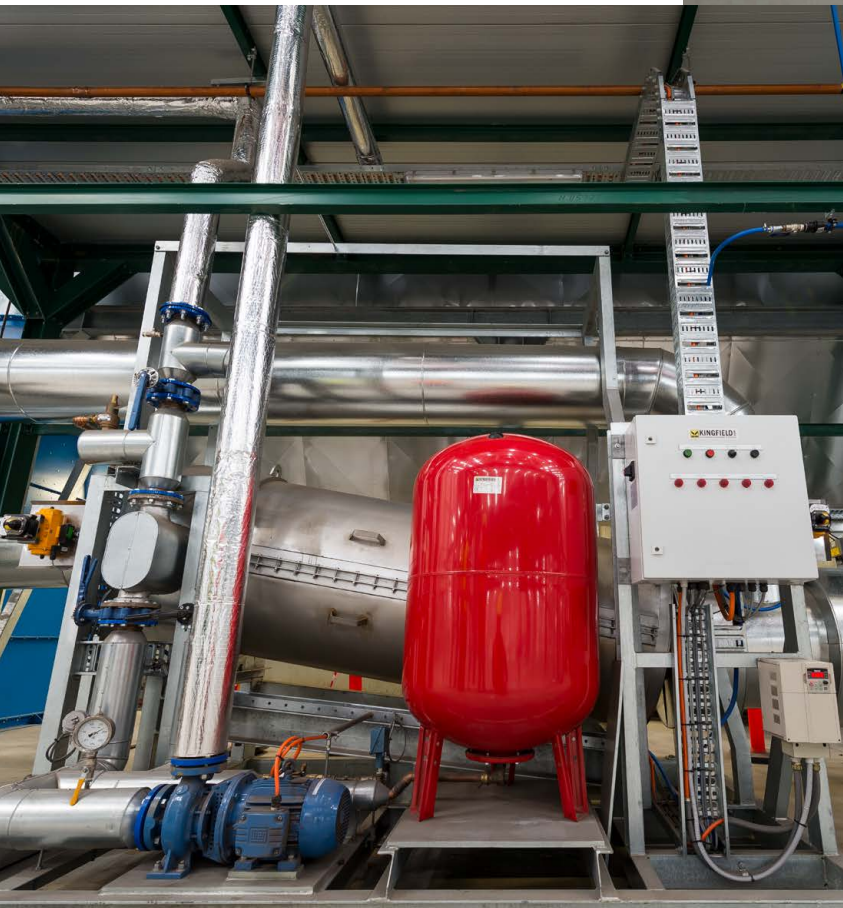

Dryers

KTE's dryers and heat exchangers are designed for the challenges of galvanizing plants and are engineered to suit the design and operations for each specific plant.

- Minimise zinc splash
- Reduces zinc waste/cost
- Provides safer operating environment
- Reduces ash
- Reduces fumes
- Improves quality of output
- Improves productivity

Heat Exchangers

- Uses excess heat from the furnace to heat the dryer.
- Heated air passes through the specially designed stainless steel pipes and helps to heat the dryer
